

How Pacemakers Can Use the OSI Model

“Patients with high remote monitoring use had 53% greater survival than patients with low remote monitoring use, and a 140% greater survival than patients not using remote monitoring at all”
 —Dr. Suneet Mittal
 Valley Hospital Heart & Vascular Institute
 New York, NY

- 1 Physical**

The heart data travels along a physical path of cables
- 2 Data Link**

Modems and other devices are used to transfer data to network devices
- 3 Network**

Routers use IP addresses to route data along a physical path to a secure server
- 4 Transport**

Breaks data into smaller segments and reassembles data at the destination
- 5 Session**

Establishes and terminates a stable connection between a computer and servers
- 6 Presentation**

Translates, formats, and encrypts, the data for the application to use
- 7 Application**

Software helps the doctor view heart data and remotely monitor a patient
